Mathematics for Physical Chemistry

Robert G. Mortimer

Mathematics for Physical Chemistry Robert G. Mortimer

Mathematics for Physical Chemistry is the ideal textbook for upper-level undergraduates or graduate students who want to sharpen their mathematics skills while they are enrolled in a physical chemistry course. Solved examples and problems, interspersed throughout the presentation and intended to be worked when met in the text, encourage self-study by students new to the material. The author provides readers with a review of calculus and differential equations that will enable them to succeed in a physical chemistry course. An ideal reference text for practicing chemists as well.

- * Completeness: contains all of the mathematics needed in undergraduate physical chemistry
- * Clarity: all sentences, examples, and equations have been constructed to make them as clear as possible
- * Applications-oriented: Designed for applications of mathematics, not for mathematical theory; written for a chemist who needs to use mathematics, not for a mathematician who needs to study the underlying theory
