The Elements of Statistical Learning: Data Mining, Inference, and Prediction (Springer Series in Statistics)

Trevor Hastie, Robert Tibshirani, Jerome Friedman

The Elements of Statistical Learning: Data Mining, Inference, and Prediction (Springer Series in Statistics) Trevor Hastie, Robert Tibshirani, Jerome Friedman

During the past decade there has been an explosion in computation and information technology. With it have come vast amounts of data in a variety of fields such as medicine, biology, finance, and marketing. The challenge of understanding these data has led to the development of new tools in the field of statistics, and spawned new areas such as data mining, machine learning, and bioinformatics. Many of these tools have common underpinnings but are often expressed with different terminology. This book describes the important ideas in these areas in a common conceptual framework. While the approach is statistical, the emphasis is on concepts rather than mathematics. Many examples are given, with a liberal use of color graphics. It should be a valuable resource for statisticians and anyone interested in data mining in science or industry. The book's coverage is broad, from supervised learning (prediction) to unsupervised learning. The many topics include neural networks, support vector machines, classification trees and boosting---the first comprehensive treatment of this topic in any book.

This major new edition features many topics not covered in the original, including graphical models, random forests, ensemble methods, least angle regression & path algorithms for the lasso, non-negative matrix factorization, and spectral clustering. There is also a chapter on methods for "wide" data (p bigger than n), including multiple testing and false discovery rates.

Trevor Hastie, Robert Tibshirani, and Jerome Friedman are professors of statistics at Stanford University. They are prominent researchers in this area: Hastie and Tibshirani developed generalized additive models and wrote a popular book of that title. Hastie co-developed much of the statistical modeling software and environment in R/S-PLUS and invented principal curves and surfaces. Tibshirani proposed the lasso and is co-author of the very successful *An Introduction to the Bootstrap*. Friedman is the co-inventor of many data-mining tools including CART, MARS, projection pursuit and gradient boosting.

From reader reviews:

Jaleesa Greenwood:

Playing with family inside a park, coming to see the sea world or hanging out with close friends is thing that usually you have done when you have spare time, subsequently why you don't try issue that really opposite from that. Just one activity that make you not sensation tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of information. Even you love The Elements of Statistical Learning: Data Mining, Inference, and Prediction (Springer Series in Statistics), it is possible to enjoy both. It is excellent combination right, you still desire to miss it? What kind of hang type is it? Oh can happen its mind hangout folks. What? Still don't buy it, oh come on its named reading friends.

Robert Carlson:

The book untitled The Elements of Statistical Learning: Data Mining, Inference, and Prediction (Springer Series in Statistics) contain a lot of information on that. The writer explains the woman idea with easy technique. The language is very easy to understand all the people, so do not necessarily worry, you can easy to read that. The book was written by famous author. The author provides you in the new time of literary works. It is possible to read this book because you can read on your smart phone, or device, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can start their official web-site as well as order it. Have a nice read.

Ray Shippee:

Beside this specific The Elements of Statistical Learning: Data Mining, Inference, and Prediction (Springer Series in Statistics) in your phone, it might give you a way to get nearer to the new knowledge or data. The information and the knowledge you can got here is fresh from your oven so don't always be worry if you feel like an previous people live in narrow commune. It is good thing to have The Elements of Statistical Learning: Data Mining, Inference, and Prediction (Springer Series in Statistics) because this book offers to your account readable information. Do you at times have book but you rarely get what it's interesting features of. Oh come on, that will not end up to happen if you have this inside your hand. The Enjoyable option here cannot be questionable, just like treasuring beautiful island. Techniques you still want to miss the idea? Find this book in addition to read it from right now!

Tracy Rendon:

Reading a guide make you to get more knowledge as a result. You can take knowledge and information coming from a book. Book is written or printed or illustrated from each source in which filled update of news. In this modern era like currently, many ways to get information are available for you actually. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, novel and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just trying to find the The Elements of Statistical Learning: Data Mining, Inference, and Prediction

(Springer Series in Statistics) when you required it?
