Metropolitan Transport and Land Use provides a fresh and unique perspective on metropolitan land use and transport networks, combining the disciplines of urban planning and civil engineering to challenge current planning strategies and offer frameworks to understand and evaluate policy. The book helps readers understand larger transportation-land use systems and their components, the need for change and workable solutions to urban problems.

This fully revised and updated edition includes coverage of new theories and perspectives on ICT and e-commerce, wider international focus, particularly on developing countries, and more thorough coverage and context on travel forecasting and accessibility throughout.

Metropolitan Transport and Land Use is a valuable resource for students, researchers, practitioners and policy advisors working across transport, land use and planning.
