Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields Rolf-Dieter Reiss, Michael Thomas

The statistical analysis of extreme data is important for disciplines such as hydrology, insurance, finance, engineering and environmental sciences. This book provides an introduction to the parametric modelling, exploratory analysis and statistical interference for extreme values. Besides numerous data-based examples, the book contains chapters on flood frequency analysis, insurance and finance. This second extended edition include: the statistical modelling of tails in conjunction with the global modelling of distributions with special emphasis on heavy-tailed distribution; the Bayesian methodology with applications to regional flood frequency analysis and credibility estimation in reinsurance business; a thorough treatment of the phenomenon of penultimate distributions; an extension of the chapter about multivariate extreme value models, especially for the Gumbel-McFadden model with an application to the theory of economic choice behaviour; sections about corrosion analysis and oldest-old problem; and risk assessment of financial assets and portfolios in the presence of fat and heavy-tailed distributions by means of the value-at-risk (VaR).

From reader reviews:

Jordan Sampson:

Information is provisions for anyone to get better life, information nowadays can get by anyone at everywhere. The information can be a knowledge or any news even restricted. What people must be consider when those information which is in the former life are hard to be find than now is taking seriously which one is suitable to believe or which one the particular resource are convinced. If you find the unstable resource then you understand it as your main information it will have huge disadvantage for you. All of those possibilities will not happen in you if you take Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields as the daily resource information.

Morris Reyna:

Would you one of the book lovers? If yes, do you ever feeling doubt if you are in the book store? Make an effort to pick one book that you never know the inside because don't determine book by its protect may doesn't work at this point is difficult job because you are frightened that the inside maybe not since fantastic as in the outside look likes. Maybe you answer may be Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields why because the excellent cover that make you consider regarding the content will not disappomnt you. The inside or content is usually fantastic as the outside as well as cover. Your reading sixth sense will directly guide you to pick up this book.

Timothy Hardy:

You will get this Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields by go to the bookstore or Mall. Merely viewing or reviewing it can to be your solve issue if you get difficulties for ones knowledge. Kinds of this reserve are various. Not only through written or printed and also can you enjoy this book by means of e-book. In the modern era similar to now, you just looking of your mobile phone and searching what your problem. Right now, choose your ways to get more information about your book. It is most important to arrange you to ultimately make your knowledge are still up-date. Let's try to choose correct ways for you.

Robert Mayo:

What is your hobby? Have you heard which question when you got college students? We believe that that query was given by teacher with their students. Many kinds of hobby, Every person has different hobby. Therefore you know that little person like reading or as examining become their hobby. You have to know that reading is very important in addition to book as to be the factor. Book is important thing to provide you knowledge, except your teacher or lecturer. You get good news or update with regards to something by book. Different categories of books that can you take to be your object. One of them is this Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields.
