Statistical Models: Theory and Practice

David A. Freedman

Statistical Models: Theory and Practice David A. Freedman

This lively and engaging textbook explains the things you have to know in order to read empirical papers in the social and health sciences, as well as the techniques you need to build statistical models of your own. The author, David A. Freedman, explains the basic ideas of association and regression, and takes you through the current models that link these ideas to causality. The focus is on applications of linear models, including generalized least squares and two-stage least squares, with probits and logits for binary variables. The bootstrap is developed as a technique for estimating bias and computing standard errors. Careful attention is paid to the principles of statistical inference. There is background material on study design, bivariate regression, and matrix algebra. To develop technique, there are computer labs with sample computer programs. The book is rich in exercises, most with answers. Target audiences include advanced undergraduates and beginning graduate students in statistics, as well as students and professionals in the social and health sciences. The discussion in the book is organized around published studies, as are many of the exercises. Relevant journal articles are reprinted at the back of the book. Freedman makes a thorough appraisal of the statistical methods in these papers and in a variety of other examples. He illustrates the principles of modeling, and the pitfalls. The discussion shows you how to think about the critical issues - including the connection (or lack of it) between the statistical models and the real phenomena. Features of the book: • authoritative guidance from a well-known author with wide experience in teaching, research, and consulting • careful analysis of statistical issues in substantive applications • no-nonsense, direct style • versatile structure, enabling the text to be used as a text in a course, or read on its own • text that has been thoroughly class-tested at Berkeley • background material on regression and matrix algebra • plenty of exercises, most with solutions • extra material for instructors, including data sets and code for lab projects (available from Cambridge University Press) • many new exercises and examples • reorganized, restructured, and revised chapters to aid teaching and understanding

From reader reviews:

Rose Sosa:

Spent a free time and energy to be fun activity to do! A lot of people spent their sparetime with their family, or their particular friends. Usually they carrying out activity like watching television, planning to beach, or picnic in the park. They actually doing ditto every week. Do you feel it? Would you like to something different to fill your current free time/ holiday? Might be reading a book can be option to fill your no cost time/ holiday. The first thing that you will ask may be what kinds of reserve that you should read. If you want to try look for book, may be the book untitled Statistical Models: Theory and Practice can be very good book to read. May be it can be best activity to you.

Robert Schneck:

Many people spending their time period by playing outside together with friends, fun activity along with family or just watching TV all day long. You can have new activity to spend your whole day by looking at a book. Ugh, ya think reading a book can definitely hard because you have to use the book everywhere? It all right you can have the e-book, taking everywhere you want in your Touch screen phone. Like Statistical Models: Theory and Practice which is getting the e-book version. So , try out this book? Let's observe.

Barbara Erickson:

Guide is one of source of know-how. We can add our expertise from it. Not only for students but also native or citizen want book to know the change information of year to help year. As we know those publications have many advantages. Beside we add our knowledge, can bring us to around the world. By the book Statistical Models: Theory and Practice we can have more advantage. Don't you to be creative people? To get creative person must like to read a book. Just simply choose the best book that suited with your aim. Don't possibly be doubt to change your life at this book Statistical Models: Theory and Practice. You can more attractive than now.

Robert Long:

Reading a guide make you to get more knowledge from the jawhorse. You can take knowledge and information from a book. Book is composed or printed or illustrated from each source in which filled update of news. On this modern era like now, many ways to get information are available for a person. From media social including newspaper, magazines, science e-book, encyclopedia, reference book, new and comic. You can add your understanding by that book. Isn't it time to spend your spare time to spread out your book? Or just searching for the Statistical Models: Theory and Practice when you needed it?
