Low Impact Building: Housing using Renewable Materials Tom Woolley

This guide to the designs, technologies and materials that really make green buildings work will help architects, specifiers and clients make informed choices, based on reliable technical information.

"Low Impact Building: Housing using Renewable Materials" is about changing the way we build houses to reduce their 'carbon' footprint and to minimise environmental damage. One of the ways this can be done is by reducing the energy and environmental impact of the materials and resources used to construct buildings by choosing alternative products and systems. In particular, we need to recognise the potential for using natural and renewable construction materials as a way to reduce both carbon emissions but also build in a more benign and healthy way. This book is an account of some attempts to introduce this into mainstream house construction and the problems and obstacles that need to be overcome to gain wider acceptance of genuinely environmental construction methods.

The book explores the nature of renewable materials in depth: where do they come from, what are they made of and how do they get into the construction supply chain? The difference between artisan and self-build materials like earth and straw, and more highly processed and manufactured products such as wood fibre insulation boards is explored.

The author then gives an account of the Renewable House Programme in the UK explaining how it came about and how it was funded and managed by Government agencies. He analyses 12 case studies of projects from the Programme, setting out the design and methods of construction, buildability, environmental assessment tools used in the design, performance in terms of energy, air tightness, carbon footprint and post-occupancy issues.

The policy context of energy and sustainability in the UK, Europe and the rest of the world is subjected to a critical examination to show how this affects the use of natural and renewable materials in the market for insulation and other construction materials. The debate over energy usage and embodied energy is discussed, as this is central to the reason why even many environmentally progressive people ignore the case for natural and renewable materials.

The book offers a discussion of building physics and science, considering energy performance, moisture, durability, health and similar issues. A critical evaluation of assessment, accreditation and labelling of materials and green buildings is central to this as well as a review of some of the key research in the field.

From reader reviews:

Carmel Smith:

The e-book with title Low Impact Building: Housing using Renewable Materials includes a lot of information that you can discover it. You can get a lot of help after read this book. This kind of book exist new knowledge the information that exist in this reserve represented the condition of the world right now. That is important to you to learn how the improvement of the world. This kind of book will bring you inside new era of the globalization. You can read the e-book in your smart phone, so you can read that anywhere you want.

Deborah Wilkerson:

Would you one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try to pick one book that you just dont know the inside because don't ascertain book by its handle may doesn't work is difficult job because you are frightened that the inside maybe not since fantastic as in the outside seem likes. Maybe you answer may be Low Impact Building: Housing using Renewable Materials why because the amazing cover that make you consider regarding the content will not disappoint you. The inside or content is usually fantastic as the outside or even cover. Your reading 6th sense will directly make suggestions to pick up this book.

Rose Watkins:

Don't be worry when you are afraid that this book can filled the space in your house, you can have it in e-book technique, more simple and reachable. That Low Impact Building: Housing using Renewable Materials can give you a lot of friends because by you considering this one book you have matter that they don't and make you actually more like an interesting person. This specific book can be one of a step for you to get success. This e-book offer you information that possibly your friend doesn't recognize, by knowing more than additional make you to be great persons. So , why hesitate? We need to have Low Impact Building: Housing using Renewable Materials.

Paul Steinbach:

You can find this Low Impact Building: Housing using Renewable Materials by go to the bookstore or Mall. Just simply viewing or reviewing it might to be your solve challenge if you get difficulties for your knowledge. Kinds of this publication are various. Not only through written or printed but also can you enjoy this book through e-book. In the modern era such as now, you just looking from your mobile phone and searching what your problem. Right now, choose your ways to get more information about your e-book. It is most important to arrange yourself to make your knowledge are still up-date. Let's try to choose proper ways for you.
