Structure and Properties of Liquid Crystals (Topics in Applied Physics) Lev M. Blinov

This book by Lev M. Blinov is ideal to guide researchers from their very first encounter with liquid crystals to the level where they can perform independent experiments on liquid crystals with a thorough understanding of their behaviour also in relation to the theoretical framework. Liquid crystals can be found everywhere around us. They are used in virtually every display device, whether it is for domestic appliances or for specialized technological instruments. Their finely tunable optical properties make them suitable also for thermo-sensing and laser technologies. There are many monographs written by prominent scholars on the subject of liquid crystals. The majority of them presents the subject in great depth, sometimes focusing on a particular research aspect, and in general they require a significant level of prior knowledge. In contrast, this book aims at an audience of advanced undergraduate and graduate students in physics, chemistry and materials science. The book consists of three parts: the first part, on structure, starts from the fundamental principles underlying the structure of liquid crystals, their rich phase behaviour and the methods used to study them; the second part, on physical properties, emphasizes the influence of anisotropy on all aspects of liquid crystals behaviour; the third, focuses on electro-optics, the most important properties from the applications standpoint. This part covers only the main effects and illustrates the underlying principles in greater detail. Professor Lev M. Blinov has had a long career as an experimentalist. He made major contributions in the field of ferroelectric mesophases. In 1985 he received the USSR state prize for investigations of electro-optical effects in liquid crystals for spatial light modulators. In 1999 he was awarded the Frederiks medal of the Soviet Liquid Crystal Society and in 2000 he was honoured with the G. Gray silver medal of the British Liquid Crystal Society. He has held many visiting academic positions in universities and laboratories across Europe and in Japan.

From reader reviews:

Nikki Jones:

Book is written, printed, or outlined for everything. You can know everything you want by a book. Book has a different type. As you may know that book is important matter to bring us around the world. Alongside that you can your reading skill was fluently. A guide Structure and Properties of Liquid Crystals (Topics in Applied Physics) will make you to become smarter. You can feel much more confidence if you can know about almost everything. But some of you think that will open or reading the book make you bored. It is not make you fun. Why they could be thought like that? Have you searching for best book or acceptable book with you?

Joseph Boyd:

Book is to be different for each and every grade. Book for children until eventually adult are different content. As we know that book is very important for all of us. The book Structure and Properties of Liquid Crystals (Topics in Applied Physics) seemed to be making you to know about other understanding and of course you can take more information. It is very advantages for you. The guide Structure and Properties of Liquid Crystals (Topics in Applied Physics) is not only giving you a lot more new information but also to get your friend when you truly feel bored. You can spend your current spend time to read your e-book. Try to make relationship using the book Structure and Properties of Liquid Crystals (Topics in Applied Physics). You never feel lose out for everything when you read some books.

Marivel Tye:

The reserve with title Structure and Properties of Liquid Crystals (Topics in Applied Physics) has a lot of information that you can study it. You can get a lot of advantage after read this book. This book exist new know-how the information that exist in this book represented the condition of the world at this point. That is important to yo7u to learn how the improvement of the world. This kind of book will bring you inside new era of the internationalization. You can read the e-book in your smart phone, so you can read the item anywhere you want.

Kim Free:

Playing with family within a park, coming to see the coastal world or hanging out with close friends is thing that usually you have done when you have spare time, in that case why you don't try factor that really opposite from that. A single activity that make you not sense tired but still relaxing, trilling like on roller coaster you already been ride on and with addition info. Even you love Structure and Properties of Liquid Crystals (Topics in Applied Physics), you could enjoy both. It is fine combination right, you still desire to miss it? What kind of hang-out type is it? Oh occur its mind hangout fellas. What? Still don't get it, oh come on its identified as reading friends.
